

Control Systems
RCP Control Panels

Multi-Bus Control Panels

Expanding on the feature set of our X/Y control panels, PESA's multi-bus panels offer greater flexibility in user interface options. With a large LCD display area, these panels provide easy-to-read characters for immediate viewing of panel destination, status, level, and preset. The RCPMB2 panel allows the user to directly view and control the status of multiple destinations while the RCP-CSD panel provides complete status display. Both panel types can be configured and controlled through a 3500PRO Series or PERC2000 system controller. These panels are designed for applications requiring control over multiple source and destinations such as news centers, command centers, or broadcast stations.

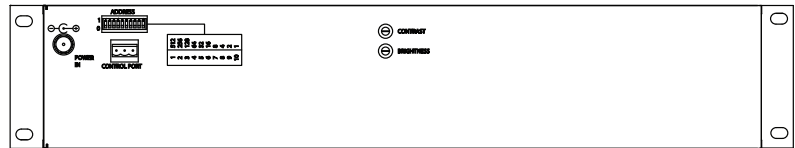

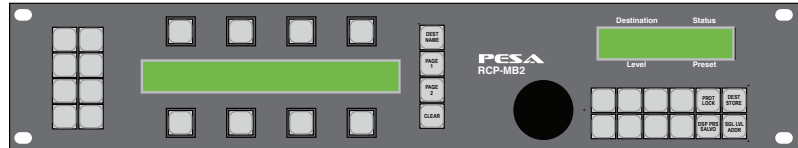

RCP Control Panels RCP-MB2

The RCP-MB2 panel offers multi-bus and multi-level control capability in a user-friendly package with a convenient rotary knob for quick selection of source and destination data.

The MB2 provides full matrix control with instant level access, breakaway switching and single button "take" capability for multiple destinations.

Easy to read LCD display provides backlit status of all functions within the panel. Pushbuttons are relegendable with LED backlighting in each for ease of reading in low light situations.

- RCPMB2: Control panel and power supply for 90-240VAC

FEATURES

- 2RU
- LCD status display for Level, Source and Destination
- Rotary knob for data selection
- Instant pushbutton level access
- Fast breakaway switching
- Single button can "TAKE" directly to multiple destinations
- Power adapter for US, UK, or Euro style plugs

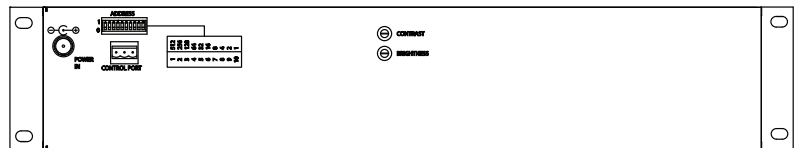

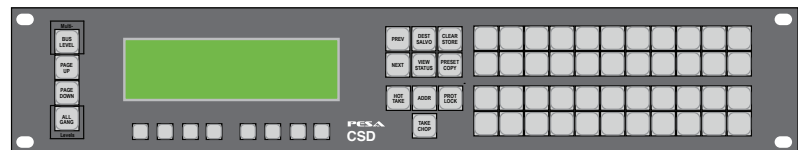

RCP Control Panels RCP-CSD

PESA's RCP-CSD, Complete Status Display control panel, is our most feature-rich panel for multi-bus and multi-level control capability. The CSD can address up to 16 switching levels and 144 destinations.

The RCP-CSD provides full matrix control with instant level access, breakaway switching and single button "take" capability for multiple destinations. There are 44 programmable user data keys, and you may program up to 18 pages of destinations.

Easy to read LCD display provides backlit status of all functions within the panel. Pushbuttons are relegendable with LED backlighting in each for ease of reading in low light situations.
